

Station Parking at the Double in Penrith

Washington based Specialist Contractor USL StructureCare have completed the waterproof roof deck coatings at the new raised deck car park at Penrith Station.

The steel framed car park was subject to a bespoke design by Car Park package contractor Huber Intelgral Bau in order to squeeze the maximum spaces out of a very confined site, almost doubling the original bay count.

The Conideck 2205 product has been used on several Network Rail projects nationwide and was again specified for use at Penrith. Being extremely rapid curing, the membrane is much less susceptible to rain damage than materials with longer cure times" said StructureCare Contracts Manager Tony Dinsdale. "The weather was at times horrendous, but we managed to maintain progress when using other materials could have led to serious delays" he added.

The car park is operated by Network Rail and the coatings were applied in their familiar and unique design.
