

Let Us Spray

Washington based Car Park Refurbishment Specialists USL StructureCare have launched their first self-built spray unit used in the application of the BASF Conideck Car Deck Membrane.

Previously, all of their specialist spray equipment has been manufactured to order in Germany and mounted in large trucks, leading to access problems on some congested city centre projects. The new spray unit has been carefully designed to be self contained on a trailer chassis which can be towed onto roof of a multi storey car park if required.

"We have many years experience in-house of manufacturing and servicing high tech spray plant for various uses in our specialist fields in the bridge deck and waterproofing markets" said USL StructureCare Contracts Manager Tony Dinsdale. "By manufacturing our own machine we have been able to tailor it to our needs to fit within the constraints of Multi Storey Car Parks with regard to headroom and weight" he added.

The unit has successfully carried out its first major projects and is now the preferred machine within the StructureCare fleet.
