

Wind Harnessed in Birmingham Car Park

Specialist contractor USL StructureCare have completed the waterproofing of the parking decks at Birmingham International Railway Station for client Network Rail.

Over 14,000m² of Conideck waterproofing and 100m of StructureCare's own UCP joint detail were combined to ensure the watertightness of the parking decks.

"It is our aim to offer owners of multi storey car parks a one-stop-shop as far as waterproofing and joints are concerned" commented StructureCare Director John Taylor.

Taylor made reference to the installation of wind turbines at roof level of the car park helping reduce the carbon footprint of the building. "We are always grateful for the opportunity to bring our expertise to such prestigious clients as Network Rail who invest in quality and innovation within their structures" he added.
